KOMPAKT DISTRIBUTION

**cover artwork:**

**Vinyl tracklisting:**

A: 69 Bux

B: Bum Bum

**sales information:**

It was in November 2009 when Professor Dr. Geiger presented his epoch-making invention to the public.

Of course, everyone was really excited, because this invention was said to shake the music industry to its very foundations.

From now on, billions of MP3, CD, music cassette as well as ordinary record players should just be scrap, and completely out-of-date.

"Today's DJ", one could read in the manual, "no longer needs all this. From now on, everything he needs is a 69 BUX.

- Just fill up to 11.5 liters of liquid vinyl into the Vinylator
- Internet on
- Select track
- Press the Bum Bum button

As soon as the record has been finished and cooled down, the techno-MKX-arm will put it on automatically.

You do not need any additional player.

We recommend to use an oak wood table.

For the next generation, more functions such as "Autosurf" or "Automix" are being planned.

3-phase, variable control: Warm-up, Party, Go Home.
